

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 03/03/2025

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The generally shallow snowpack will become damp overnight. Above about 1000 metres the surface will freeze later in the night and be crusty during the day. At lower levels it will slowly thaw and consolidate. In both cases stability will remain good. The avalanche hazard will be Low.

Forecast Weather Influences

After a little overnight precipitation, which will fall as sleet on the highest summits, a dry windy day is expected. The freezing level will be around 1000 metres.

Comments

Although the hills look white at higher levels the snowpack is shallow, and much of it will soon be gone when it turns mild and damp on Tuesday.
