

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 03/03/2025

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The limited and moist snow cover will be consolidated and stable throughout, slowly thawing at most elevations, refreezing overnight above 950 metres. The remnant patchy old snow will remain firm. Greatest snow cover will be on high North to East aspects, chiefly on the more inland mountains. Very little snow exists below 750 metres. The avalanche hazard will be Low.

Forecast Weather Influences

Rain this evening, with likely summit sleet, will clear around midnight to give a largely dry and cloudy day, but with the slim chance of a light snow shower on the highest summits in the afternoon. The South-West to West-South-West gales will ease slightly overnight and the freezing level will lower from above the summits to around 900 metres same time..

Comments

The current snow cover will thaw and slowly diminish at all elevations into next week as milder and wetter conditions prevail. It will remain windy.
