

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Wed 12/03/2025 TO 18:00HRS Thu 13/03/2025

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

It will remain dry throughout the period with variable Northerly winds, strong this evening then easing moderate to light. The overnight freezing level will be around 200 metres, rising to around 600 metres during the day.

Forecast Snow Stability and Avalanche Hazard

A superficial dusting of snow and rime will be present in wind sheltered pockets mainly on North to East aspects above 900 metres. Amounts will not be significant and mostly on bare ground. Older snow patches will be present in mainly higher Northerly and Easterly corries and gullies above 900 metres. These patches will be frozen and firm, stability will be good. The avalanche hazard will be Low.

Observed Avalanche Hazard - Wed 12/03/2025

Observed Weather Influences

Generally dry and bright with sunny spells and occasional showers, falling as very light snow above 900 metres. Winds were moderate to fresh from the North-West.

Observed Snow Stability and Avalanche Hazard

A superficial dusting of new snow and rime is present on mainly North and East aspects above 900 metres. This snow and rime is mostly on bare ground and amounts are not significant. Snow patches remain mainly in higher Northerly and Easterly corries and gullies above 900 metres. These patches are frozen and firm, stability is good. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions

Sparse snow cover mostly bare ground. Good visibility. Winds approx 10mph to 20mph.

Comments

Water ice is present on some higher paths and on bare ground, mostly avoidable. Remaining cold towards the weekend.
