

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Thu 13/03/2025 TO 18:00HRS Fri 14/03/2025

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

North-Easterly winds will ease through the period. After a few light snow showers overnight it will be a dry day. The freezing level will be around 500 metres.

Forecast Snow Stability and Avalanche Hazard

Little change is expected. The snowpack will remain hard, icy, patchy and stable. The greatest deposits will be found in high North to East facing gullies and coires. Any fresh deposits overnight will not be significant. The avalanche hazard will be Low

Observed Avalanche Hazard - Thu 13/03/2025

Observed Weather Influences

It remained dry but a cloudy day with the freezing level around 700 metres. Northerly winds eased through the day.

Observed Snow Stability and Avalanche Hazard

The patchy old snowpack is refrozen and generally stable. There is a slight dusting of fresh snow above about 900 metres, but nowhere is this significant. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions

Sparse snowpack with a dusting of soft snow at high levels. Good visibility. Winds 20 -30 mph easing through the day.

Comments

The old snowpack not extensive, but where does remain it is very hard and icy.
