

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 19/03/2025

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will be generally well bonded and stable. Older snow will remain firm and icy and be present mainly in steeper locations on North-West to North-East aspects above 900 metres. More recently developed snow patches continue to slowly consolidate, presenting a breakable crust in some locations. Greatest amounts are located on South-East to South-West aspects above 1000 metres. The avalanche hazard will be Low.

Forecast Weather Influences

The freezing level will be above the summits, although due to high pressure much terrain will be frozen above 500 metres overnight, gradually warming through the day. Partly cloudy in the evening becoming clear overnight then sunny during the morning with some cloud in the afternoon. Light to moderate Southerly winds.

Comments

High pressure slowly loosing its influence from Thursday into Friday.
