

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sun 06/04/2025 TO 18:00HRS Mon 07/04/2025

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Continuing dry and clear, sunny through the day. Cool with frost possible overnight. Daytime winds will be light to moderate generally Westerly. Summit temperatures initially will be around 0.5 degrees Celsius rising to 6 degrees Celsius through the course of the day.

Forecast Snow Stability and Avalanche Hazard

Daily avalanche reports have ended for this season. Please refer to SAIS homepage <https://www.sais.gov.uk> for current general snowpack and mountain information. The SAIS team would like to thank you for all your support over the last winter and wish you a good summer. See you next winter!

Observed Avalanche Hazard - Sun 06/04/2025

Observed Weather Influences

Another dry and sunny day, feeling cool in shaded areas in the moderate to fresh Easterly winds. Cool conditions affected the area overnight, the freezing level climbed above the summits throughout the morning.

Observed Snow Stability and Avalanche Hazard

There is currently insufficient snow for an avalanche hazard and no avalanche reports will be published unless conditions change. For further information please refer to the SAIS mountain blog.

Mountain Conditions

Observed Mountain Travel Conditions	Sparse snow cover mostly higher summits. Good visibility Winds approx 10-20 mph
Comments	Old stubborn patches of snow in shaded gullies and hollows firm and icy in places, serious run out potential exists below steeper slopes with exposed rocks below.
