

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sat 22/11/2025 TO 18:00HRS Sun 23/11/2025

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Staying dry and cold overnight. Freezing at glen levels at first, then the freezing level rising to around 1000m. Some showers during the day falling as snow above 8-900m. Winds, Westerly overnight remaining light, then backing through the day from South-Westerly through South and South Easterly then moderate to fresh North-Easterly.

Forecast Snow Stability and Avalanche Hazard

The snowpack will continue to refreeze and consolidate and will be stable throughout. Some snow is expected but accumulations are not expected to be significant in depth. The avalanche hazard will be Low

Observed Avalanche Hazard - Sat 22/11/2025

Observed Weather Influences

A dry and clear day with a freezing level around 900m. Winds light Westerly.

Observed Snow Stability and Avalanche Hazard

Rain to summits overnight Friday has affected the snowpack at all elevations. The snowpack is moist to depth and cooling temperatures through the day has helped consolidate and stabilise the snowpack throughout. Instabilities within the snowpack remain present but are diminishing rapidly and the gradually refreezing snow surface presents a stable snowpack on all aspects and altitudes. The avalanche hazard is Low

Mountain Conditions

Observed Mountain Travel Conditions	Deep snow at all altitudes - very hard going on foot breakable crust . Knee deep at 600m! Good visibility. Winds approx 10mph or less
Comments	A clear day and recent warming and cooling has helped stabilise the snowpack. remaining similar conditions and a bit colder after weekend.
