

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Mon 01/12/2025 TO 18:00HRS Tue 02/12/2025

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Winds are expected to be moderate South-Easterly this evening, overnight veering South-Westerly and strengthening to gale force. Showers are expected throughout the night and into the morning, falling as snow above 900 metres. The freezing level is expected to be around 1000 metres.

Forecast Snow Stability and Avalanche Hazard

Fresh unstable windslab will be deposited in wind sheltered areas, mainly on North-West through North to East aspects above 1000 metres. Western aspects will also be affected this evening. Fragile cornices will build above North-West through North to East aspects. On other aspects and at lower elevations the snowpack will be generally stable. The avalanche hazard will be Moderate.

Observed Avalanche Hazard - Mon 01/12/2025

Observed Weather Influences

After overnight precipitation which fell as snow mainly above 1150 metres it was a dry day. Winds were strong, mainly South-Westerly. During the day the freezing level was around 1150 metres.

Observed Snow Stability and Avalanche Hazard

Some fresh windslab has been deposited in high wind sheltered locations, mainly on North-West to North-East aspects above 1150 metres. This was consolidating during the day. Greatest accumulations of the older snow lie on North to East aspects mainly above 1000m. Some small cornices are present above these aspects. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions	Variable conditions underfoot, with icy patches, breakable crust and hard snow. Poor visibility above 1100m. Winds 20-30 mph.
