# Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Tue 02/12/2025 TO 18:00HRS Wed 03/12/2025

Hazard Level	Avalanche Probabilty
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
:Moderate:	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

## Forecast Weather Influences

Winds are expected to be gale force generally Southerly. It will be dry overnight, with showers starting just before dawn continuing through the day, though more showery. These will fall as snow mainly above about 850 metres. The freezing level will be around 900 metres.

## Forecast Snow Stability and Avalanche Hazard

Moderately bonded windslab will be present in wind sheltered locations. Greatest accumulations will lie on North-West through North to East aspects above 950 metres. Cornices will be present above these aspects. On other aspects and at lower elevations the snowpack will be generally stable. The avalanche hazard will be Moderate.

# **Observed Avalanche Hazard - Tue 02/12/2025**

### Observed Weather Influences

After overnight precipitation, which fell as snow above 850 metres, there were some light showers during the day. Winds were gale force, mainly South-Westerly. The freezing level was around 900 metres.

## Observed Snow Stability and Avalanche Hazard

Fresh unstable windslab has been deposited in wind sheltered locations, mainly on North-West through North to East aspects above 900 metres. Drifting continued through the day. Fragile cornices are building above these aspects. On other aspects and at lower elevations the snowpack is generally stable. The avalanche hazard is Moderate.

#### Mountain Conditions

<b>Observed Mountain Travel</b>
Conditions

Variable underfoot with icy patches, shallow snow on ice and deep drifts of new windslab. Cloudy on the tops, with some brighter spells. Winds 35-45 mph.
