Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Fri 05/12/2025 TO 18:00HRS Sat 06/12/2025

Hazard Level	Avalanche Probabilty
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Overnight precipitation will fall as snow above about 800 metres. This will turn showery and to rain at all but the highest levels during the day as the freezing level rises to above the summits. Storm force South-Easterly winds overnight will ease through the day.

Forecast Snow Stability and Avalanche Hazard

Some wet snow instabilities will exist in the snowpack found on North-West to North-East aspects above 1100 metres. These areas will not be particularly extensive and should generally be avoidable. The small sections of cornice which exist above these aspects will be prone to collapse. The avalanche hazard will be Moderate.

Observed Avalanche Hazard - Fri 05/12/2025

Observed Weather Influences

It was a generally dry day with strengthening South-Easterly winds. After a cooler period overnight, the freezing level rose to about 1000 metres during the day.

Observed Snow Stability and Avalanche Hazard

Some deposits of windslab exist above 1100 metres. Most affected are sheltered North-West to North-East aspects, particularly at the tops of gullies. However, these deposits are reasonable well bonded, and are not particularly extensive. At lower levels, and on other aspects the snowpack tends to be shallow and stable. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions	Main snow cover above 1000 metres. Poor visibility on the tops for most of the day. Light winds at first strengthening through the day.
Comments	Very strong winds expected overnight, easing through the day.
