

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Mon 08/12/2025 TO 18:00HRS Tue 09/12/2025

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

It will be a mild and wet day with heavy rain and the freezing level well above the summits. Storm force winds will be from the South-East.

Forecast Snow Stability and Avalanche Hazard

The main snowpack will be above 1000 metres. It will thaw rapidly in the mild and wet conditions. Stability will be generally good, although a few minor wet snow instabilities are expected on very steep slopes. However, any remaining sections of cornice will be prone to collapse in the wet conditions. The avalanche hazard will be Low.

Observed Avalanche Hazard - Mon 08/12/2025

Observed Weather Influences

Overnight and through the day there were periods of precipitation which fell as wet snow above 1100 metres. The freezing level fluctuated between about 1200 and 1400 metres. Winds were from the South or South-West.

Observed Snow Stability and Avalanche Hazard

The snowpack is wet and slowly thawing. There are some deposits of fresh snow above 1100 metres, but these tended to be wet and relatively stable. However, there are some unstable sections of cornice at the tops of gullies above 1100 metres. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions	Wet snow throughout. Reasonable visibility. Winds 20 -30 mph progress difficult at times with stronger gusts.
Comments	Unpleasant weather expected on the hill on Tuesday.
