Avalanche Problems

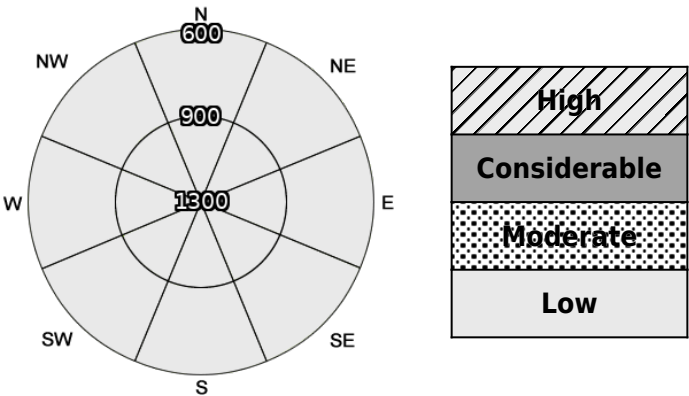

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

The old snowpack will remain stable on all aspects and elevations. Isolated accumulations of windslab will develop around coire rims and gully tops on Northerly to Easterly aspects above 1100 metres, these will be shallow and generally avoidable. On these aspects fragile cornices will begin to develop. Below 1100 metres the snowpack will continue to diminish. The avalanche hazard will be Low.

Forecast Weather Influences

Storm force South-Westerly winds will ease to gale force before veering towards the West during the day. The freezing level will fall and fluctuate around summit levels, then rise above the tops by late afternoon. Precipitation throughout the forecast period, this will fall as sleet and snow at summit levels.

Comments

Slightly cooler conditions with the potential for summit snow during Wednesday.
