

Avalanche Hazard Forecast for Monday 15/12/2025

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will be limited to small receding high altitude snow patches, mainly on North to East aspects above 950 metres. These patches will refreeze in the colder conditions. There will be insufficient snow to warrant an avalanche hazard category. For further information please refer to the SAIS mountain blog.

Forecast Weather Influences

After evening rain at all levels it is expected to be dry from midnight onwards, with the freezing level dropping to around 950 metres. Winds will be moderate to strong South-South-Westerly.
