

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 15/12/2025 TO 18:00HRS Tue 16/12/2025

THE AVALANCHE HAZARD WILL BE LOW**Avalanche Hazard Forecast for Tuesday 16/12/2025****Avalanche Problems**

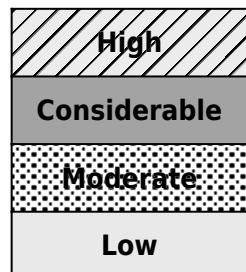

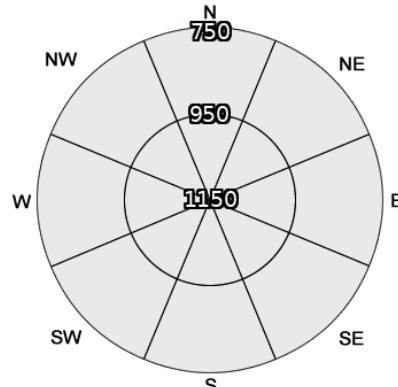

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

New snow and strong winds will form localised areas of windslab mainly around the tops of gullies and corrie rims with a Northerly to Easterly aspect above 900 metres. In most areas the new accumulations will land on bare ground with little or no hazard. Caution will be required should significant depth develop or where old snow underlies. The avalanche hazard will be Low.

**Forecast Weather Influences**

Snow showers overnight and through the course of Tuesday will affect slopes above 750 metres, these showers will be frequent and occasionally heavy. Winds will be fresh to strong generally South-Westerly. The freezing level will be around 850 metres.

Comments

New snow overnight will mainly lie on bare ground, instabilities will exist where deeper accumulations of windslab form on steep slopes or where old snow underlies. Cornices if they form will be fragile.
