

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 21/12/2025

Avalanche Problems

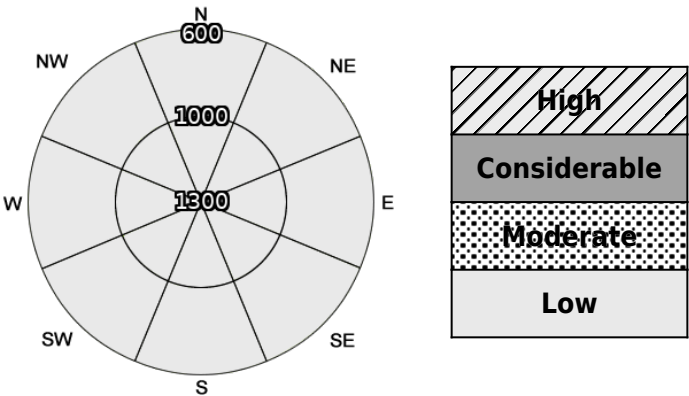

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to consolidate. Some isolated instabilities may linger within deeper deposits on North-West through North to East aspects above 1000 metres. Areas mainly affected will be on steep terrain such as, corrie rims and gully exits. Any new windslab on West to North aspects above 1000 metres will be shallow, isolated and avoidable. Remaining cornices will be unstable mainly during the day. The avalanche hazard will be Low.

Forecast Weather Influences

Strong to gale force South-Easterly winds will ease to strong through the afternoon. Some light snowfall during the night followed by a mainly dry day. Cooler overnight before the freezing level rises above the summits by late morning.

Comments

Weather looking unsettled for the next couple of days, potential for high pressure building from the West on Tuesday.
