

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 22/12/2025

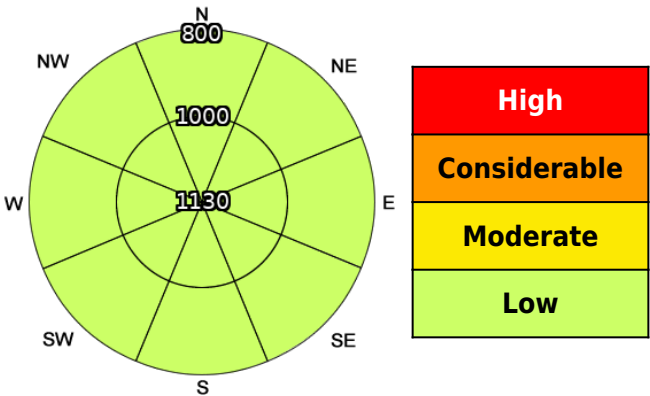

Avalanche Problems

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will moisten but remain generally well stabilised in most locations. Remaining cornices over very steep slopes will weaken and be prone to collapse on to the slopes below; most affected locations will be North to East aspects above 1000m. Some snow loss expected at lower elevations by the end of the day. The avalanche hazard will be Low

Forecast Weather Influences

Mild throughout with the freezing level at around 1750m, rising to 2000m by the end of the day. A few light rain showers from before dawn to around midday.

Comments

Good general snowpack stability but damp mild conditions expected to weaken any remaining cornices above N to E aspects.
