

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Wed 31/12/2025 TO 18:00HRS Thu 01/01/2026

THE AVALANCHE HAZARD WILL BE LOW**Avalanche Hazard Forecast for Thursday 01/01/2026****Avalanche Problems**

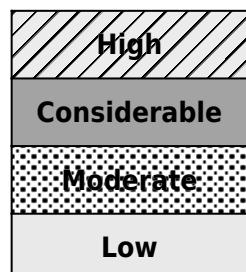

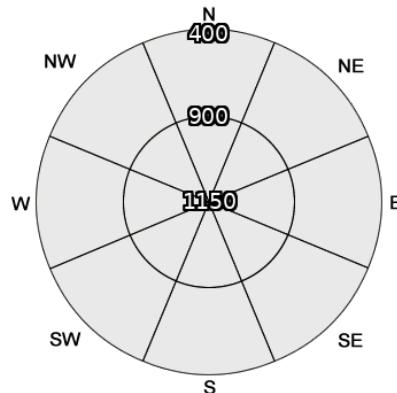

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Fresh snow deposits, mostly landing on bare ground, will form on all aspects and at increasingly lower levels through the period. Localised deposits of unstable windslab will also form through the day, mainly in wind sheltered locations on North-East through East to South aspects above 900 metres. Most affected areas will be around gully tops, coire rims and ridge flanks. Cornices may also begin to form. The avalanche hazard will be Low.

**Forecast Weather Influences**

Strong to gale force North-Westerly winds will bring frequent snow showers throughout the period. These showers initially falling as snow above 800 metres this evening, and then to lower elevations as the freezing level drops, around 400 metres by dawn and lower through the day.

Comments

Snowfall amounts are uncertain given the showery nature of the weather.
