

**THE AVALANCHE HAZARD WILL BE MODERATE**

**Avalanche Hazard Forecast for Saturday 03/01/2026**

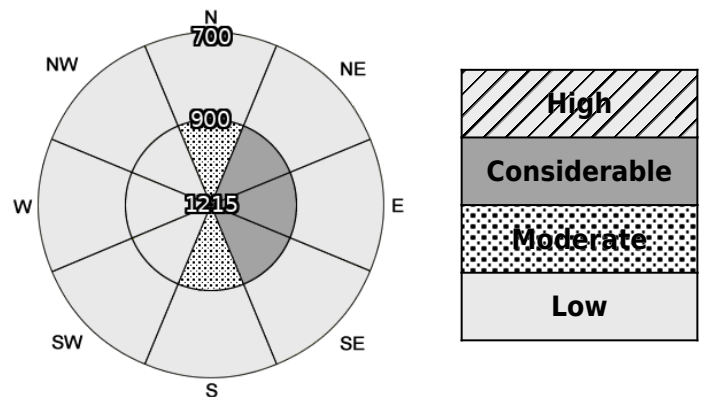

**Avalanche Problems**

Wind Slab

**Forecast Snow Stability & Avalanche Hazard**

Snow cover will become more extensive to low levels on all aspects. Unstable windslab will continue to develop and deepen in wind sheltered and mostly specific locations on Easterly through South to Westerly aspects mostly above 700m with gully tops, ridge flanks, coire head walls and rims mostly affected. At lower elevations and mainly above 500m localised windslab accumulations will also be present in steep banks and burn lines. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

Winds will be gale force North-Westerly or Northerly throughout the forecast period. Precipitation will fall as snow to all levels in the showers which will be frequent, sometimes persistent and heavy.

**Comments**

A colder and wilder day with heavier snow showers. Arctic conditions are due to continue with more snow to come.
