

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 07/01/2026

Avalanche Problems

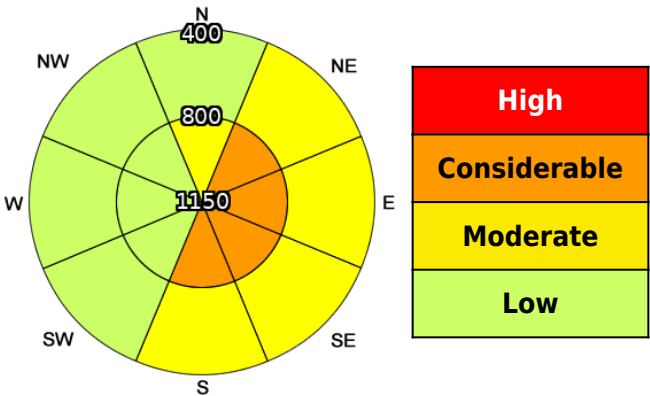

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will continue to develop in wind sheltered locations mainly on North-East through East to South aspects above 800 metres. Isolated unstable deposits will also be found on North aspects and in lee locations at lower elevations. Steep terrain such as corrie rims, gully tops, scarp slopes and steep lee locations will be most affected. Any cornices will be fragile. The avalanche hazard will be Considerable.

Forecast Weather Influences

The freezing level will drop slightly to around 400 metres. There will be further snow showers, potentially heavy at times mainly overnight and throughout the morning. Winds will be gale force overnight but easing to moderate throughout the day.

Comments

Potentially heavy snow showers at times. Very slow going on the hill.
