

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Wed 07/01/2026 TO 18:00HRS Thu 08/01/2026

THE AVALANCHE HAZARD WILL BE CONSIDERABLE**Avalanche Hazard Forecast for Thursday 08/01/2026****Avalanche Problems**

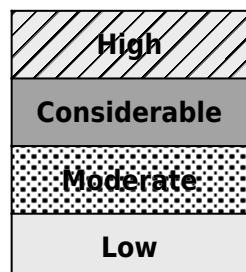

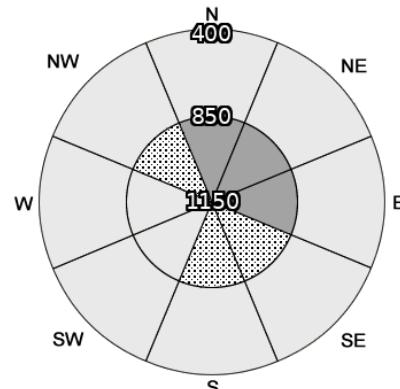

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Deposits of new snow will fall above 400 metres on most aspects. Accumulations of new unstable windslab will form in wind sheltered locations mainly on North-West through North to Easterly aspects mostly above 850 metres. Localised windslab deposits will persist on South-East and Southerly aspects but to a lesser extent. Sheltered hollows, coire rims, ridge flanks, gullies and the tops of gullies will be most affected. Cornices will be fragile. The avalanche hazard will be Considerable.

**Forecast Weather Influences**

The freezing level will be around 500 metres. Light to moderate variable but Southerly winds with snow showers starting in the early hours then through most of the period. Some drier intervals in the afternoon.

Comments

Some deep drifts of snow in wind sheltered locations. Remaining cold and wintry with a change in wind direction.
