

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 16/01/2026

Avalanche Problems

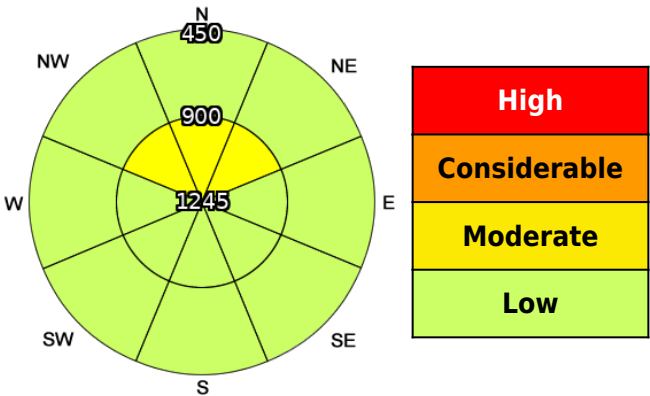

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Some light drifting at higher elevations especially during the afternoon. Accumulations of windslab will be present on North-West to North-East aspects above 900 metres. The greatest instability will be in steep wind sheltered terrain, such as coire rims, gully tops and crag aprons. Cornices will be fragile. Elsewhere the snowpack will remain well bonded and stable throughout. The avalanche hazard will be Moderate.

Forecast Weather Influences

Dry conditions expected throughout the forecast period. Fresh Southerly winds will ease to light at dawn before increasing fresh to strong through the day, backing South-South-Easterly. The 800 metre freezing level will gradually rise to 1000 metres by the end of the forecast period.

Comments

Dry conditions expected over the next 24 hours with the potential for some sunshine.
