

## Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sun 01/02/2026 TO 18:00HRS Mon 02/02/2026

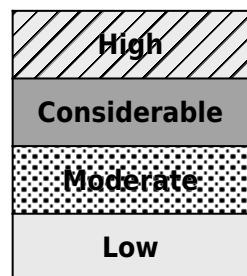

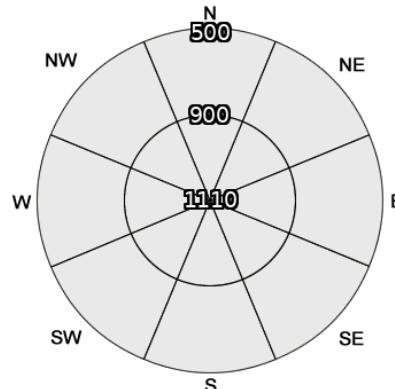

### THE AVALANCHE HAZARD WILL BE LOW

#### Avalanche Hazard Forecast for Monday 02/02/2026

##### Avalanche Problems

##### Forecast Snow Stability & Avalanche Hazard

No significant change is expected with the snowpack being firm and stable throughout. Greatest snow amounts are predominantly on North-West through North and East to Southerly aspects above 700m. Elsewhere, snow is confined to gullies and patches. The avalanche hazard will be Low.

##### Forecast Weather Influences

The freezing level will be around summit level, dropping to 800 metres towards the end of the forecasting period. Light Easterly winds initially, increasing throughout the daytime to become strong. No precipitation is expected.

##### Comments

The Easterly airstream continues with little change expected. Snow will be firm and run outs could have serious consequences.
