

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Thursday 05/02/2026

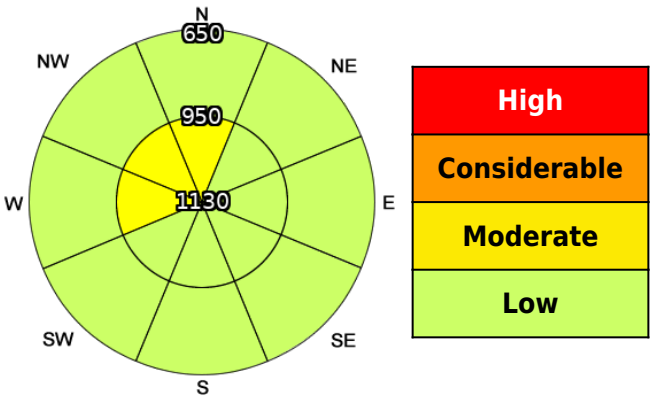

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Good stability on all windward slopes where there will be hard or crusty conditions. Older windslab on recent lee slopes expected to consolidate over the forecast period. New weak localised windslab development anticipated on steep sheltered West to North-West aspects above 950m; some selected steep North facing slopes and gullies will also be affected. Cornices will overhang some of these locations. The avalanche hazard will be Moderate.

Forecast Weather Influences

A period of snowfall overnight and into the morning then generally dry. Strong East-South-Easterly winds throughout. Briefly freezing near summits overnight then progressively colder again.

Comments

Good stability in many places. New windslab expected to be localised and quite specific in distribution.
