

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 14/02/2026

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Stability will remain good in many places. Hard and icy conditions will be prevalent. At first, localised deposits of windslab on some steep South aspects above 950m. Stronger winds and a change in direction may induce drifting later in the period and lead to new thin and weak windslab development on some steep North to North-East aspects above 950m. The avalanche hazard will be Low.

Forecast Weather Influences

No precipitation is forecast. Remaining very cold. Light West-North-West winds freshening and becoming South- Westerly, then Southerly much later.

Comments

Significant change in weather from the end of the forecast period on Saturday into Sunday. 6 to 9hrs of snowfall expected Saturday night to early hours Sunday.
