

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 15/02/2026

Avalanche Problems

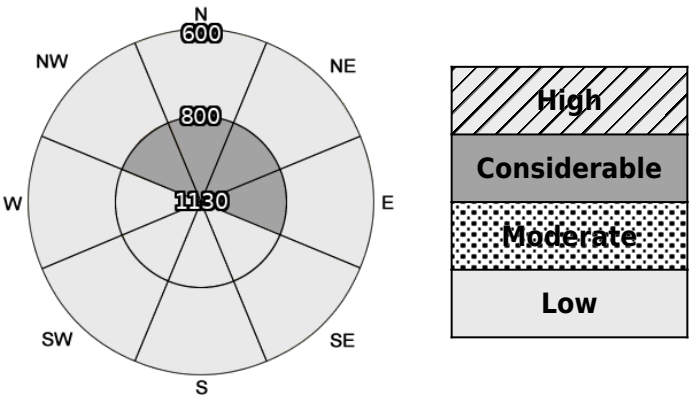

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Weak windslab will gain depth and become extensive on most lee slopes. Poor stability on all steep North-West through North to East aspects above 800m. Newly formed weak cornices will hang over many of these locations. Much better stability on all windward aspects and ridges. The avalanche hazard will be Considerable.

Forecast Weather Influences

Heavy overnight snowfall turning showery by dawn. Strong South-South-East winds easing to moderate in the morning and becoming South-South-Westerly later. Very cold overnight, freezing level rising to 750m by midday.

Comments

Very wintry weather in prospect, especially overnight.
