

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Monday 16/02/2026

Avalanche Problems

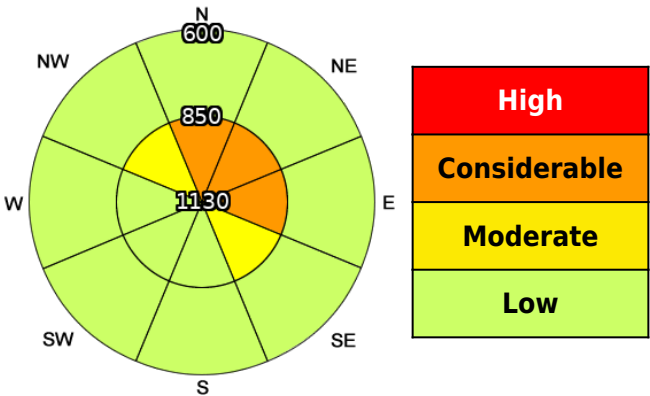

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will persist on North-West through North-East to South-East aspects above 850 metres. Areas most affected will be steep wind sheltered terrain such as coire rims and gully tops. Fragile cornices will be present above the same aspects. Stability better at lower elevations and in places exposed to the wind. The avalanche hazard will be Considerable.

Forecast Weather Influences

Snow showers above 600 metres overnight, then a drier interlude before further snow in the afternoon. The freezing level will fluctuate around 650 metres initially, decreasing from midday to 400 metres. Moderate South-Westerly winds will veer North-North-West throughout the day while increasing to become fresh.

Comments

Forecast to be colder and drier through Tuesday and Wednesday.
