

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Friday 20/02/2026

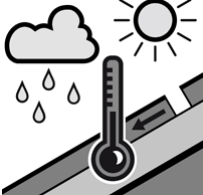

Avalanche Problems

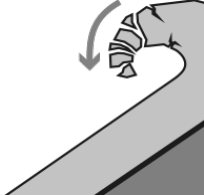

Wind Slab

Persistent Weak Layers

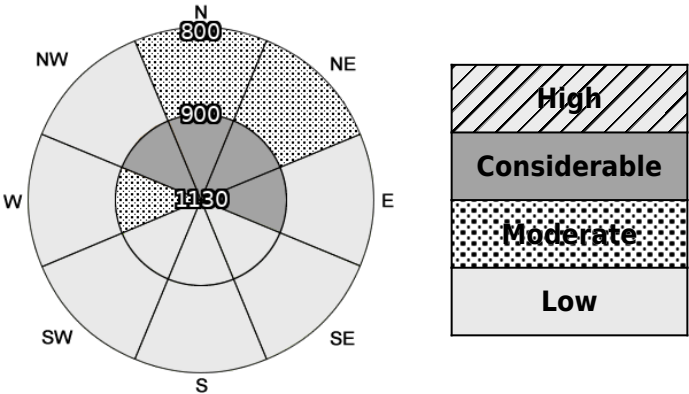

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Period of poor stability with the onset of milder temperatures after earlier snowfall and drifting. Most affected locations will be steep North-West through North to East aspects above 900m. Recently formed cornices will weaken later. Some minor wet snow instabilities possible on very steep ground as low as 800m during the afternoon. The avalanche hazard will be Considerable.

Forecast Weather Influences

Distinct weather change in prospect. Snowfall throughout the period, heaviest during the morning, with rain at lower levels from dawn onwards. Freezing level at 700m overnight then rising to summits from morning onwards. Moderate Southerly or South-Westerly winds becoming strong during the morning.

Comments

Period of poorer stability expected after midday.
