

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 26/02/2026

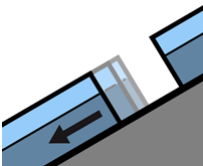

Avalanche Problems

Wet Snow

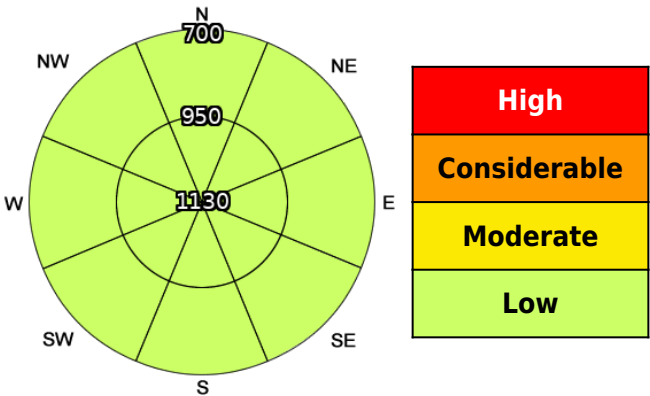

Cornices

Gliding Snow

Forecast Snow Stability & Avalanche Hazard

The thaw continues with more snow loss expected. Some surface instabilities are possible from the steepest slopes above 950m on North-West to Easterly aspects. But generally, although the snowpack will be wet it will remain stable in most areas. Any remaining cornices will weaken further and be prone to collapse. Some potential for minor full depth avalanches from snow slopes and gullies above steep crags. The avalanche hazard will be Low

Forecast Weather Influences

Heavy rain at all levels overnight and during the day, with some sleet or snow on the tops for a time. Freezing level mostly well above the summits but briefly at summit levels mid morning. Winds strong to Gale forces South-Westerly.

Comments

Ice, rock and cornice collapse remains a threat when below crags
