

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Thursday 12/03/2026

Avalanche Problems

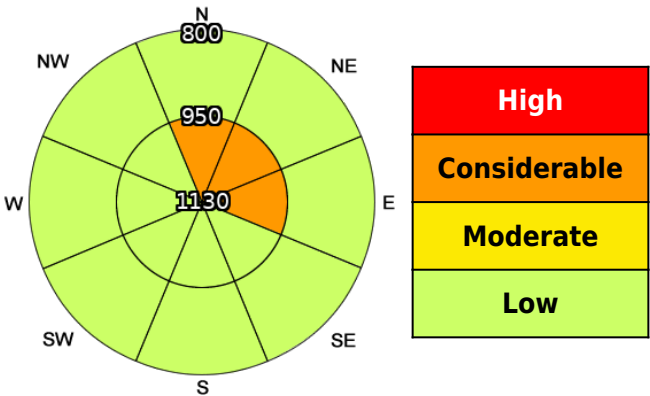

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Poor stability overnight and again from dawn onwards. Weak windslab will become deeper and more extensive on all steep North to East aspects above 950m. Weak newly formed cornices anticipated above these locations. Better stability at lower altitudes, on ridges and all wind exposed aspects. The avalanche hazard will be Considerable

Forecast Weather Influences

Stormy and wintry weather in prospect. A sequence of heavy snow showers throughout the period easing a little after midday. Rain at lower altitudes for a time. Very strong and gusty South South West winds becoming South West later.

Comments

Very stormy weather in prospect.
