

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 21/03/2026

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to slowly consolidate and stability will be good in all locations and elevations. The surface will become firm overnight, softening during the day. The greatest continuous snow amounts will exist mainly on North to Easterly aspects above 850 metres patchy cover below this level. Any remaining cornices will be unstable affecting slopes below. The avalanche hazard will be Low.

Forecast Weather Influences

High pressure continues to bring dry conditions through the period with partly clear overnight skies which may produce some patchy frost in sheltered glens. The main freezing level will remain well above all the summits. The moderate South-Westerly winds will ease slightly but remain South-Westerly.

Comments

Some unsettled weather approaching on Sunday.
