

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Thursday 26/03/2026

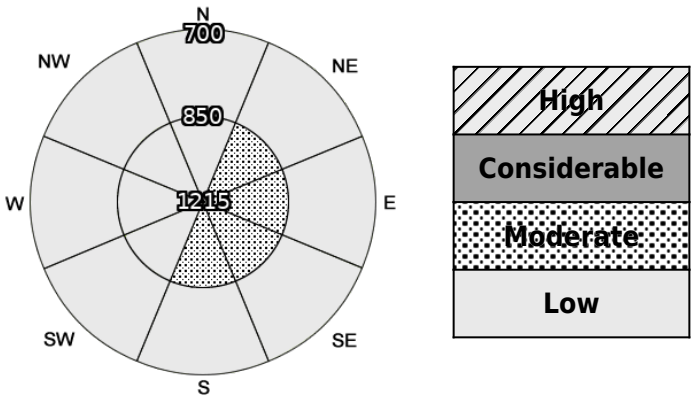

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Localised, moderately bonded windslab will be found in wind sheltered locations on North-East through East to South aspects above 850 metres. Features such as gully tops, sharply defined corrie rims and steep burn lines will be most affected. Many areas will be wind scoured or hold shallow new snow only. The avalanche hazard will be Moderate.

Forecast Weather Influences

Mainly dry with just a trace of new snow expected. Strong North-Westerly winds overnight, will ease as they back, to become moderate South-Westerly by the end of the period. 350 metre freezing level overnight, rising to 750 metres during the afternoon.

Comments

A rapid return to winter conditions above 850m - trail breaking required in places. Severe windchill and persistent drifting of deposits.
