

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 27/03/2026

Avalanche Problems

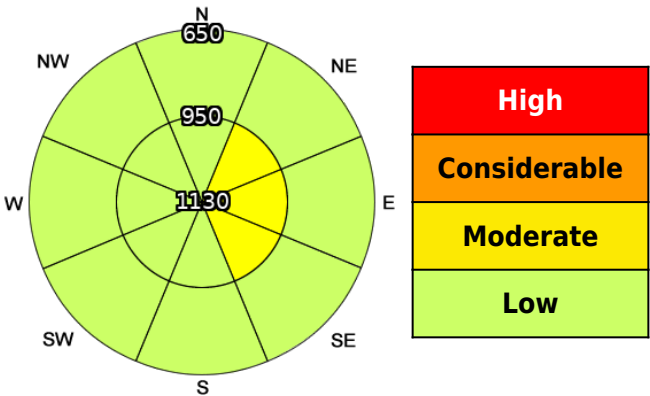

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

A period of poor stability overnight after the onset of mild, damp weather. Most affected areas will be very steep North-East to South-East aspects above 950m. All cornices expected to weaken at this time. Much better stability in all locations from the early hours onwards. Some thin new windslab is possible on steep North-East to East aspects above 950m by then end of the day. The avalanche hazard will be Moderate.

Forecast Weather Influences

Mild and damp at all elevations overnight. Much cooler from the earlier hours onwards and dry for a time. Light snow showers from midday onwards.

Comments

Period of poorest stability overnight then much better stability everywhere by midday.
