

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 07/04/2026

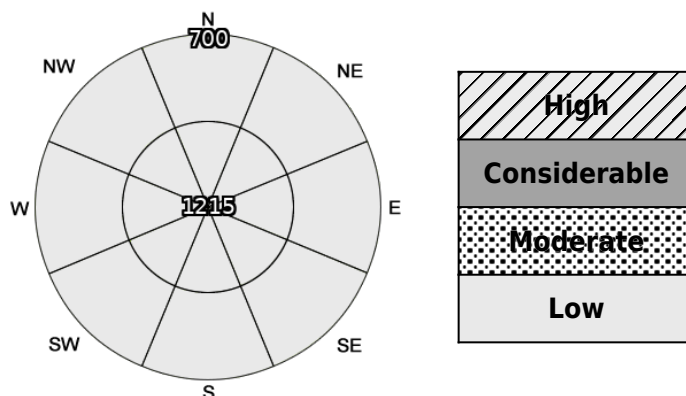

Avalanche Problems

Wet Snow

Forecast Snow Stability & Avalanche Hazard

Snow surface layers will soften, especially where exposed to direct sunlight. The vast majority of snow will be generally well bonded. Minor surface wet snow instability will be displayed by recent deposits in steeper wind sheltered locations on North through East to South-East aspects above 1000 metres. Collapsing cornice remnants on these aspects will provide the greatest hazard in the very mild conditions. The avalanche hazard will be Low.

Forecast Weather Influences

No precipitation has been forecast. Strong South-East or South-South-Easterly winds. Freezing level rising up to 2750 metres during the evening with the air temperature gradually rising to reach plus 8 degrees Centigrade at 900 metres by Tuesday afternoon.

Comments

This is the last specific area hazard report for the South Cairngorms. North Cairngorm forecast team will continue to issue reports for the rest of this week.
