

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 08/04/2026

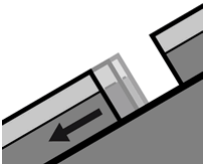

Avalanche Problems

Wind Slab

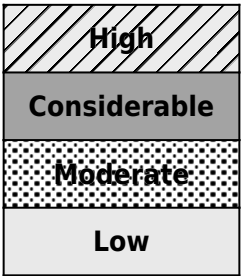

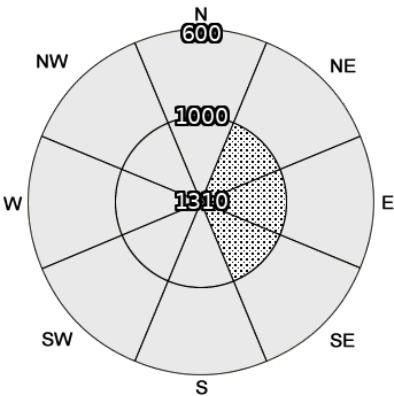

Cornices

Gliding Snow

Forecast Snow Stability & Avalanche Hazard

Generally good stability, continuing steady thaw and slow consolidation of the snowpack. However, moderately bonded layers within recent windslab accumulations will be present on mainly North-East to South-East aspects above 1000 metres. Coire headwalls and gully tops will be most affected. Cornices will be prone to collapse. Full depth avalanches will be an increased threat, particularly on slopes with underlying rock slabs. The avalanche hazard will be Moderate.

Forecast Weather Influences

Gale force Southerly winds will ease overnight then veer South-South-West and be fresh to strong for the remainder of the period. Dry throughout, with cloudy skies for much of the time. The freezing level will be above the summits.

Comments

Increased risk of full depth avalanche on the great slab of Coire an Lochain due to persistent warm temperatures. Glide cracks on steep terrain should be treated with caution.
