Northern Cairngorms

Avalanche Hazard Forecast

Issued 21/11/2026

FOR PERIOD 18:00HRS Sat 21/11/2026 TO 18:00HRS Sun 22/11/2026

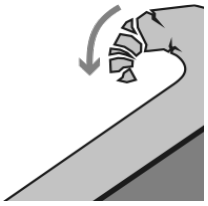

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 22/11/2026

Avalanche Problems

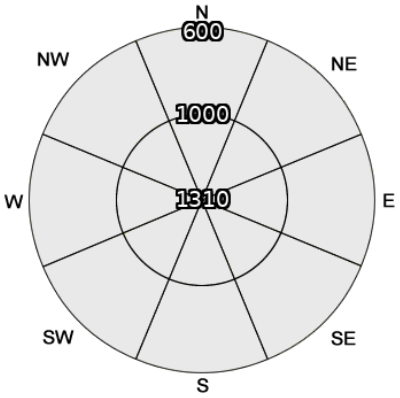

Wind Slab

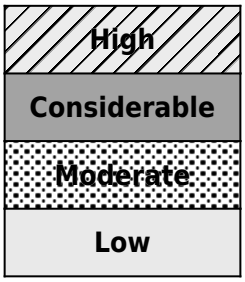

Cornices

Forecast Snow Stability & Avalanche Hazard

New windslab will develop on West to North aspects mainly above 1000 metres. Although poorly bonded these accumulations are expected to be isolated, sometimes localised and mostly affect coire rims and the tops of gullies. On these aspects fragile cornices will develop. Wind exposed areas will become scoured. The avalanche hazard will be Low.

Forecast Weather Influences

Mostly dry with very occasional snow flurries. Fresh to strong South-East winds will increase to gale force early on Sunday, easing through the day and backing to become East-South-Easterly.

Comments

There is still the potential for small avalanches in the Low Avalanche Category
Small avalanches in steep terrian can have serious consequenses
