

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Saturday 02/01/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The variable winds will deposit unstable windslab on South-East through South and West to North-West aspects above 800 metres where Avalanches are likely. Isolated areas of windslab may also accumulate in sheltered locations on other aspects due to cross loading. A weak, sugary layer of facets will remain within the snowpack in many locations. The avalanche hazard will be Considerable.

Forecast Weather Influences

There will be snow showers throughout the forecast period, being most frequent overnight and during the morning. North-Westerly winds will veer to the East around dawn.

Comments

Careful route choice recommended in the continuing cold conditions.
