Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sat 02/01/2010 TO 18:00HRS Sun 03/01/2010

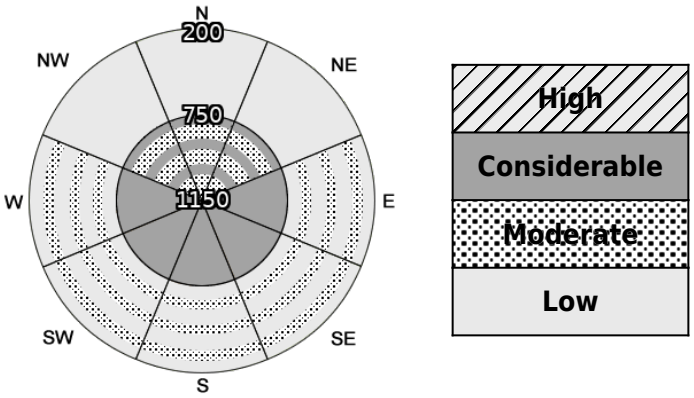

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 03/01/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

With bitterly cold air expected any accumulations of windslab will be very weakly bonded to the existing snowpack. Sheltered gullies and hollows of many aspects, and particularly slopes with a South-East through South to North-Westerly aspect mainly above 750 metres will be unstable and avalanches are likely. The avalanche hazard will be Considerable.

Forecast Weather Influences

It will remain cold with variable moderate winds and light snow showers

Comments

Areas of windslab, many of which are of a localised nature will require great caution and careful route planning. Ice is forming on a good number of routes now.
