

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sun 03/01/2010 TO 18:00HRS Mon 04/01/2010

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

The cold conditions will continue with light snow showers at all levels. Winds will be light

Forecast Snow Stability and Avalanche Hazard

No significant new snow accumulations are expected. Areas of poorly bonded windslab will be present on steep South and West aspects above 800m. This windslab will also be present in localised deposits on other aspects above this altitude. The avalanche hazard will be Considerable

Observed Avalanche Hazard - Sun 03/01/2010

Observed Weather Influences

Cold and dry conditions

Observed Snow Stability and Avalanche Hazard

Areas of poorly bonded windslab are present on steep South and West aspects above 800m. This windslab can also be found in localised deposits on other aspects. The avalanche hazard is Considerable

Mountain Conditions

Observed Mountain Travel Conditions

Snow at al levels.

Comments

Localised areas of hazard on many aspects above 800m. Careful route choice necessary
