Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 04/01/2010 TO 18:00HRS Tue 05/01/2010

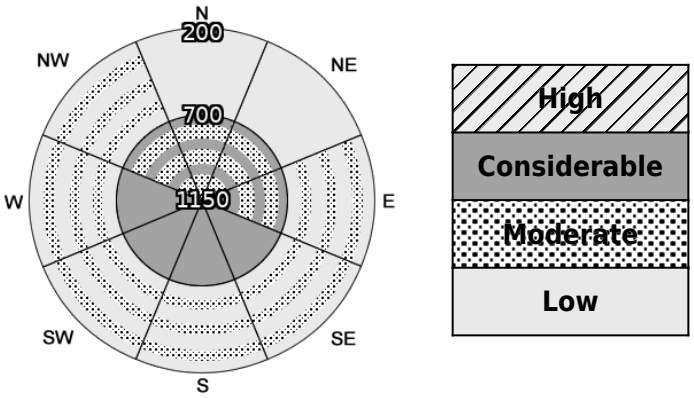

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 05/01/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Strong winds will redistribute existing snow forming very weakly bonded windslab in all sheltered gullies and hollows and also on South-East through South to Westerly aspects mainly above 700 metres. Avalanches are likely wherever deep windslab forms. Steep scarp slopes and gully exits will be particularly affected The avalanche hazard will be Considerable.

Forecast Weather Influences

Winds will be strong Northerly overnight veering North Easterly on Tuesday. It will remain cold and there will be occasional snow showers.

Comments

Unstable windslab will require great caution and careful route planning. Ice is continuing to form on a good number of routes.
