Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Wed 06/01/2010 TO 18:00HRS Thu 07/01/2010

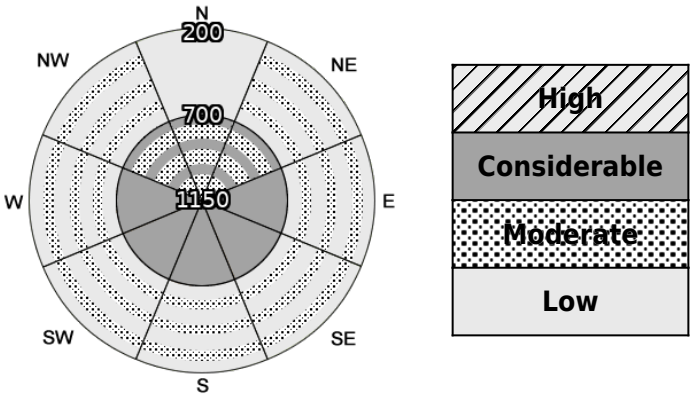

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Thursday 07/01/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

With continuing cold conditions little change is expected to the condition of the snowpack. Many slopes will remain wind scoured with good stability but deep unstable windslab will exist mainly above 700 metres in sheltered gullies of many aspects and also on slopes with an East through South to Westerly aspect, steep scarp slopes and gully exits will be particularly affected. The avalanche hazard will be Considerable.

Forecast Weather Influences

It will remain very cold with no new snow and moderate Northerly winds.

Comments

With a very cold outlook windslab accumulations will be subject to development of in depth weaknesses. These areas will require great caution and careful route planning. Ice is continuing to form on a good number of routes. Superb weather on Wednesday and a good outlook for the coming few days.
