

## THE AVALANCHE HAZARD WILL BE CONSIDERABLE

### Avalanche Hazard Forecast for Friday 08/01/2010

#### Avalanche Problems

#### Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to contain weakly bonded layers on all aspects mainly above 800 metres. Where windslab has formed on the top of this snowpack avalanches are likely, in particular Corrie rims, gully flanks and sheltered lee slopes on East through South to West aspects above 900 metres will be affected. The avalanche hazard will be Considerable

#### Forecast Weather Influences

Some very light snow showers may occur overnight on a North-Easterly breeze. During the day the winds will be Easterly and light with no precipitation. Minus 9 degrees celsius on the tops.

#### Comments

Hard going in the deep snow - some brave souls have spent a large part of the day trail breaking into Coire an t Sneachda !!. Good route finding required in the unstable conditions..
