

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Mon 11/01/2010 TO 18:00HRS Tue 12/01/2010

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Moderate snow amounts with strong South-Easterly winds are expected. Temperatures will remain cold.

Forecast Snow Stability and Avalanche Hazard

There will be new windslab accumulations on existing instabilities, particularly on North-Westerly aspects above 600 metres where avalanches are likely. Instabilities will continue to be present in the snowpack on South to Westerly aspects. The avalanche hazard will be Considerable

Observed Avalanche Hazard - Mon 11/01/2010

Observed Weather Influences

There were strong Easterly winds at higher elevations and continued cold temperatures. There was no measurable new precipitation.

Observed Snow Stability and Avalanche Hazard

Field tests indicated some overall improvement in stability of the snowpack. The cold mid-pack still contains weak layers previously identified. The avalanche hazard is Considerable.

Mountain Conditions

Observed Mountain Travel Conditions

Much scouring due to Easterly winds.

Comments

Ski quality good for uphill track, somewhat flat light for downhill.
