

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Tue 12/01/2010 TO 18:00HRS Wed 13/01/2010

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Strong South-East winds will continue with light snow showers. The freezing level will be around 400m.

Forecast Snow Stability and Avalanche Hazard

Areas of fresh windslab will continue to form in areas sheltered from the South-East winds. Areas of existing unstable snow will persist above 600m. Greatest accumulations will be on steep South-West, West and North aspects. Localised deposits will be present on other aspects. The avalanche hazard will be Considerable

Observed Avalanche Hazard - Tue 12/01/2010

Observed Weather Influences

Strong SE-S winds with some light snow showers

Observed Snow Stability and Avalanche Hazard

Areas of unstable snow are present on many aspects above 600m. Greatest accumulations are on steep South-West, West and North aspects. Localised deposits are present on other aspects. The avalanche hazard is Considerable

Mountain Conditions

Observed Mountain Travel Conditions

Snow at all levels although now slowly thawing below 400m.

Comments

Strong SE winds expected to ease slightly
