Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Wed 13/01/2010 TO 18:00HRS Thu 14/01/2010

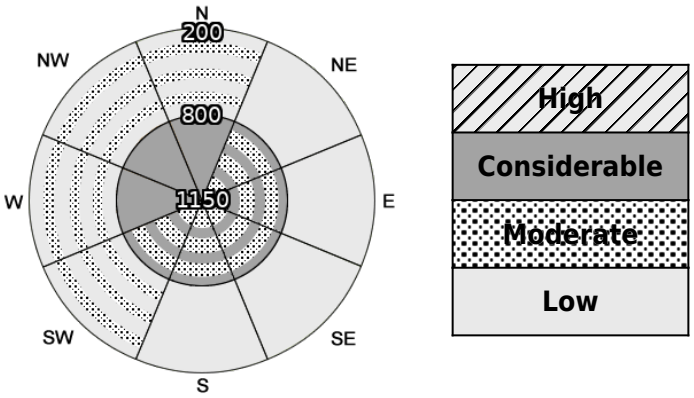

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Thursday 14/01/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Stability on wind scoured slopes will generally be reasonable with the odd possibility of isolated patches of unstable windslab in sheltered hollows. Deeper areas of windslab will exist in the most sheltered gullies and also on slopes with a South-West to Northerly aspect mainly above 800 metres where avalanches are likely Steep scarp slopes and gully exits will be particularly affected. The avalanche hazard will be Considerable.

Forecast Weather Influences

Snow showers mostly light will continue overnight and during the day. Winds will remain South-Easterly, strong at first decreasing to fresh by morning. It will become a bit milder.

Comments

Becoming less windy.
