

THE AVALANCHE HAZARD WILL BE HIGH

Avalanche Hazard Forecast for Saturday 16/01/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

A complex warming snowpack with heavy rain and later snow will be very unstable on steep, Northerly aspects above 600 metres where avalanches will occur. Avalanches will be triggered on other aspects by the onset of rain. The avalanche hazard will be High.

Forecast Weather Influences

There will be high freezing levels for a time, with rain followed by snow. The winds will be very strong Southerly.

Comments

Could be a major avalanche cycle in the forecast period, particularly off plastered crags.
