

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 19/01/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The old snowpack below 800m is now well consolidated and stable. Localised new snow instabilities will persist on mostly North through East to South-East aspects above 900m, especially on steep sheltered gully exits and around coire rims. The avalanche hazard will be Moderate.

Forecast Weather Influences

It will remain dry and the steady thaw will persist at all levels overnight with freezing levels around summits, lowering slightly to 900m by midday.

Comments

Steady thaw to all levels with Freezing levels lowering to 900m during the day.
