Avalanche Hazard Forecast

Issued 25/01/2010

FOR PERIOD 18:00HRS Mon 25/01/2010 TO 18:00HRS Tue 26/01/2010

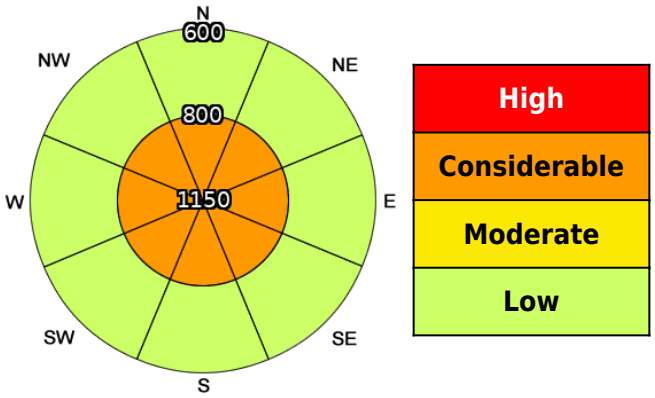

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 26/01/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

This rapid rise in freezing levels will cause wet snow instabilities on many slopes on all aspects but more especially on steeper slopes and gullies. The greatest hazard will on West through North to East aspects above 800 metres where the deeper accumulations of snow exists and avalanches are likely. The avalanche hazard will be Considerable.

Forecast Weather Influences

Overnight light snow showers and South-Westerly winds will give way to much milder conditions during the day. The freezing level will rise to above the summits with moderate amounts of rain. Winds will become moderate West, South-Westerly

Comments

As its been quite cold of late with frost and colder air in the lower glens however with tomorrows rapid freezing level rise, it might be, that it will quickly warm up at summit levels.
