

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 26/01/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Avalanches are likely on many aspects due to the effects of warming and light rain but especially those with a deeper snowpack. Aspects of main concern are mainly South through West to North above 800 Metres. Cornice collapse will trigger deep releases. The avalanche hazard will be Considerable

Forecast Weather Influences

The freezing level will go well above the summits. There will be some snow and sleet becoming light rain later with moderate winds from the South-West going West-South-West.

Comments

This is the first major warming cycle in over a month. Refresh setting required on the avalanche radar.
