

THE AVALANCHE HAZARD WILL BE HIGH

Avalanche Hazard Forecast for Thursday 28/01/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The existing snowpack will freeze solid during the night. The heavy snow that falls during the day will deposit fresh, poorly bonded windslab in sheltered locations, mainly on East to South aspects above 900 metres. Avalanches will occur in steep slopes and gullies where significant amounts of windslab are deposited. Fresh cornices will be prone to collapse. The avalanche hazard will be High.

Forecast Weather Influences

After a cool dry night, heavy snow is expected during the day. The freezing level will slowly rise to around 750 metres before falling again towards the end of the day. Moderate winds will be from the North-West.

Comments

Conditions deteriorating through Thursday
