THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Friday 29/01/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Areas of soft, poorly bonded windslab will exist on South-East to South-West aspects above 800 metres. However these areas are not expected to be particularly extensive. Elsewhere will be generally well bonded and stable. Where exposed to the wind, the snowpack will be scoured, hard and icy. The avalanche hazard will be Considerable

Forecast Weather Influences

It will generally be dry, but with odd snow showers being possible overnight and during the day. Strong winds will be from the North. It will be cold with the temperature below freezing at all levels.

Comments

Much colder conditions during Friday and through the weekend.
